**Discussion Topic**

"Identify trends and monitor potential consequences of technological development" (*Standard 6H, p. 137, Standards for Technological Literacy*). Having seen and heard about some uses for the polarization rotator and optical shutter from Mr. Bauchert, talk to a friend and then, each of you write down one use for a polarization rotator/optical shutter to solve an individual or community problem (real or imagined) *Colorado Science CMS 5.c*

**Hint:** If you can't think of some uses, use the following guiding questions for your quick write: What did you do/remember; What did you learn; What did you find interesting; and What questions do you have?

Created By Nathan Balasubramanian  
09/08/05 10:31PM

**Messages**

<b>Andrew S.</b>	Posted 09/09/05 08:51AM Optical shutters can be used in a camera.
<b>Christina G.</b>	Posted 09/09/05 08:51AM what i remember is you can use it to make light to focus on the camera
<b>Bennett A.</b>	Posted 09/09/05 08:51AM Benn- What I remember about polarization is you can use it to make light darker and lighter in cameras to focus the pictures better.
<b>Bryan D.</b>	Posted 09/09/05 08:52AM An optical shutter could be used on a cammera for the shutter. If tooo much or too little light is entering, it could adjust so that the film is not over exposed or under exposed.
<b>Jasna H.</b>	Posted 09/09/05 08:53AM You can put the polarization rotator/optical shutter in the windows of the house so you can change the lighting of your house.
<b>Sarah H.</b>	Posted 09/09/05 08:53AM you could put opycal polarization rotator/optical shutters in a house so you can contorl the flow of light coming in and out of your house ,so you don't have refleitions on your T.V.
<b>Harutyun P.</b>	Posted 09/09/05 08:53AM An optical sutter can be used on a camera.
<b>Anthony H.</b>	Posted 09/09/05 08:53AM Optical shutters could be used as a window when you need a room to be dark, (like when developing your own photos).
<b>Alahna N.</b>	Posted 09/09/05 08:54AM you can use optical shutters in cameras
<b>Tynan C.</b>	Posted 09/09/05 08:54AM I think that optical shutters could be used in a # of things. Such as glasses (lab experiments only) or telescopes. But cameras would be the main thing that their in.
<b>Michael P.</b>	Posted 09/09/05 08:54AM you could put opycal polarization rotator/optical shutters in a house so you can contorl the flow of light coming in and out of your house ,so you don't have refleitions on your T.V.
<b>April A.</b>	Posted 09/09/05 08:55AM You can put the glass in the windows in your house so that light cant come through when you sleep because the two plates of glass only lets in light vertically and horintly.
<b>Alahna N.</b>	Posted 09/09/05 08:56AM Eric: What i remember about polorizasion is u can use it to make light lighter and darker in cameras,and vidio cameras for better film and pictures
<b>Erin K.</b>	Posted 09/09/05 08:56AM You can have put a polarization rotator + optical shutter in your window and it will let light in when open but not when it is closed.
<b>Adrian E.</b>	Posted 09/09/05 08:58AM What i remember is that you con use an optical shutter for a camera lens so ist could look better
<b>Elias W.</b>	Posted 09/09/05 08:59AM optical shutters can be used as tinting
<b>Joshua Seth P.</b>	Posted 09/09/05 09:00AM you could put opycal polarization rotator/optical shutters in a house so you can contorl the flow of light coming in and out of your house ,so you don't have refleitions on your T.V.
<b>Jason P.</b>	Posted 09/28/05 09:10AM you can use opticals in camera lenses
<b>Lucas R.</b>	Posted 01/18/06 09:14AM optical shuytters are cool they are and can be used with camaras
